

Automated Students Safety & Locating System

What is tturk?

TTURK is a culmination of thought process towards addressing prevailing issues of student safety and tracking. This led to the expectation of information updates for parents right from the child steps out from home to school and returns back.

Current solutions are based on RFID Tags and gate antennas, with challenges like more students, multiple gates, availability of real time information and cost, making the solution unviable.

Tturk with its cutting edge technologies like Bluetooth Low Energy, Artificial Intelligence, Internet of Things & Near Field Communication, addresses the above challenges.

The end to end solution is designed and engineered indigenously, making it cost effective, scalable, robust and easy to deploy.

Why tturk?

- SaaS—Software as Service model
- Affordable Pricing Plans
- Active BLE Tags - No need to swipe, flash & recharge
- Custom designed ID Cards
- First of its kind-Indigenous design
- Designed with latest technologies
- Can withstand tough operating Environments
- One View Dashboard for School
- Convenience of Seamlessly integrated App & Portal for Parents
- On cloud and Networked Campus with 8 hours of power backup, to ensure 100% uptime

Features

Parents
